Forest Management

- **Classify raster images**

  Analyze your forest resources for crown closure, species, stand type or vigor with powerful and easy-to-use supervised and unsupervised image classification.

- **Manage resources**

  Combine data from any source (for example, databases or GIS products, including an editable link to ARC/INFO coverages). Convert raster regions to vector polygons. Calculate polygon statistics.

- **Flexible map production**

  - Produce accurate maps from a regional to a local level.
  - Highlight forest stands or change.
  - Add grids, z-scales, text, automatic classification keys, and north arrows quickly and easily.
  - Get high-quality output to all devices from our built-in PostScript-compatible hardcopy engine.
